

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

Claims 1, 2, 6, 7, 9, 14 and 15 (canceled).

3. (currently amended): An image forming apparatus comprising:
image forming stations for respective colors arranged along a transfer belt, each said
image forming station including an image carrier, a charging means and a developing means
disposed around said image carrier, wherein said transfer belt is arranged obliquely, and an
electrical component box in which power sources and control circuits are housed is arranged
below or above said transfer belt.~~An image forming apparatus as claimed in claim 1, further~~
~~comprising~~
a housing body in which said image forming stations and said transfer belt are arranged,
and
a frame which is attached to said housing body such that the frame is pivotally movable,
wherein a transfer belt unit and an image carrier unit, or a transfer belt unit, an image carrier unit,
and the developing means are attached to said frame.

4. (original): An image forming apparatus as claimed in claim 3, wherein pivot shafts of
said frame are provided at both sides of the housing body.

5. (original): An image forming apparatus as claimed in claim 3, wherein pivot shafts of said frame are provided at a lateral side of the housing body.

8. (currently amended): An image forming apparatus comprising image forming stations for respective colors arranged along a transfer belt, each said image forming station including an image carrier, a charging means and a developing means disposed around said image carrier, wherein said transfer belt is arranged obliquely, and an electrical component box in which power sources and control circuits are housed is arranged below or above said transfer belt,

wherein said transfer belt is an intermediate transfer belt, and~~An image forming apparatus as claimed in claim 7,~~

wherein the image carriers of the respective image forming stations are arranged in contact with a belt face, of which traveling direction is downward, of said intermediate transfer belt.

10. (currently amended): An image forming apparatus comprising:
image forming stations for respective colors arranged along a transfer belt, each said image forming station including an image carrier, a charging means, an array-type writing head as an image writing means, and a developing means disposed around said image carrier, wherein said transfer belt is arranged obliquely, and a driving circuit for said array-type writing heads is

arranged below or above said transfer belt. ~~An image forming apparatus as claimed in claim 9,~~
~~further comprising~~

a housing body in which said image forming stations and said transfer belt are arranged,
and

a frame which is attached to said housing body such that the frame is pivotally movable,
wherein a transfer belt unit and an image carrier unit, or a transfer belt unit, an image carrier unit,
and the developing means are attached to said frame.

11. (original): An image forming apparatus as claimed in claim 10, wherein said array-
type writing head and the driving circuit are detachably connected to each other via a connector.

12. (original): An image forming apparatus as claimed in claim 11, wherein pivot shafts
of said frame are provided at both sides of the housing body.

13. (original): An image forming apparatus as claimed in claim 11, wherein pivot shafts
of said frame are provided at a lateral side of the housing body.

16. (currently amended): An image forming apparatus comprising:
image forming stations for respective colors arranged along a transfer belt, each said
image forming station including an image carrier, a charging means, an array-type writing head
as an image writing means, and a developing means disposed around said image carrier,

wherein said transfer belt is arranged obliquely, and a driving circuit for said array-type writing heads is arranged below or above said transfer belt,

wherein said transfer belt is an intermediate transfer belt, and

~~An image forming apparatus as claimed in claim 15,~~ wherein the image carriers of the respective image forming stations are arranged in contact with a belt face, of which traveling direction is downward, of said intermediate transfer belt.
